

IRB No.: Pro00049729
Approval Date: 11/20/2018

Dear Patient,

My colleague, Joshua Pevnick, MD, is conducting a research study, "A Prospective Case Series Analysis of Initial Users of the Urovac Device" at the California Rehabilitation Institute. The purpose of this study is to better understand the benefits and challenges of the Urovac device, which is a handheld urinal attached by tubing to a pump that empties urine to a reservoir, for patients with functional incontinence.

I am contacting you because I believe that you may be eligible to participate in this research because you are a man with urinary incontinence, which is a condition in which patients have difficulty getting to or using the toilet to evacuate urine.

My colleague has asked that I share the attached information with you. Please be assured that my colleague will not contact you if you indicate that you are not interested in learning more about this study. Included with this letter is the study consent form. This document provides a detailed description of the study's purpose, procedures, and potential risks and benefits.

Remember that participation in research is completely voluntary. Your decision to participate or not to participate will not affect your relationship with me or the care you receive. If you do not wish to be further contacted about this study, please call Dr. Joshua Pevnick at 310.423.6976. Otherwise, a member of the research team will visit you in your room in the coming days to discuss the study with you.

If you have questions or concerns, please do not hesitate to contact me at (310) 423-6400.

Sincerely,

Chris Boudakian, DO
